

### Gulf of Mexico Harmful Algal Bloom Bulletin

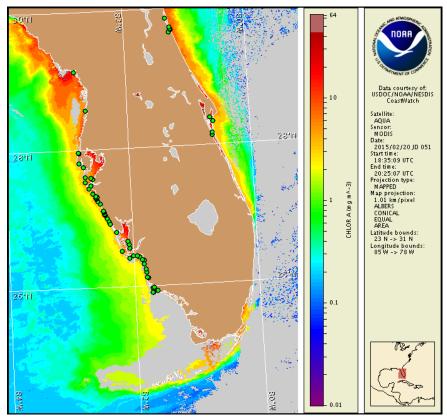

Region: Southwest Florida Monday, 23 February 2015

NOAA National Ocean Service

NOAA Satellite and Information Service

NOAA National Weather Service

Last bulletin: Tuesday, February 17, 2015

Satellite chlorophyll image with possible *K. brevis* HAB areas shown by red polygon(s), when applicable. Points represent cell concentration sampling data from February 13 to 20: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

# **Conditions Report**

There is currently no indication of *Karenia brevis* (commonly known as Florida red tide) along the coast of southwest Florida, including the Florida Keys. No respiratory irritation is expected alongshore southwest Florida Monday, February 23 through Monday, March 2.

Check <a href="http://tidesandcurrents.noaa.gov/hab/beach\_conditions.html">http://tidesandcurrents.noaa.gov/hab/beach\_conditions.html</a> for recent, local observations.

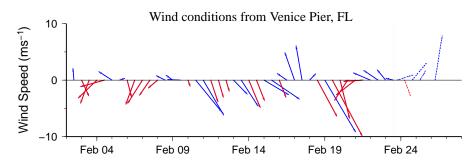

#### **Analysis**

The most recent samples received from along- and offshore southwest Florida, from Pinellas to Collier counties, all indicate that *Karenia brevis* is not present (FWRI, MML, SCHD, CCPCPD; 2/14-19).

Recent MODIS Aqua imagery (2/20, shown left) is obscured by clouds from alongshore Collier County to the Florida Keys, limiting analysis. Elevated chlorophyll (2-4  $\mu$ g/L) is visible along- and offshore the coast of southwest Florida from Pinellas to Collier counties.

Harmful algal bloom formation at the coast of southwest Florida is not expected today through Monday, March 2.

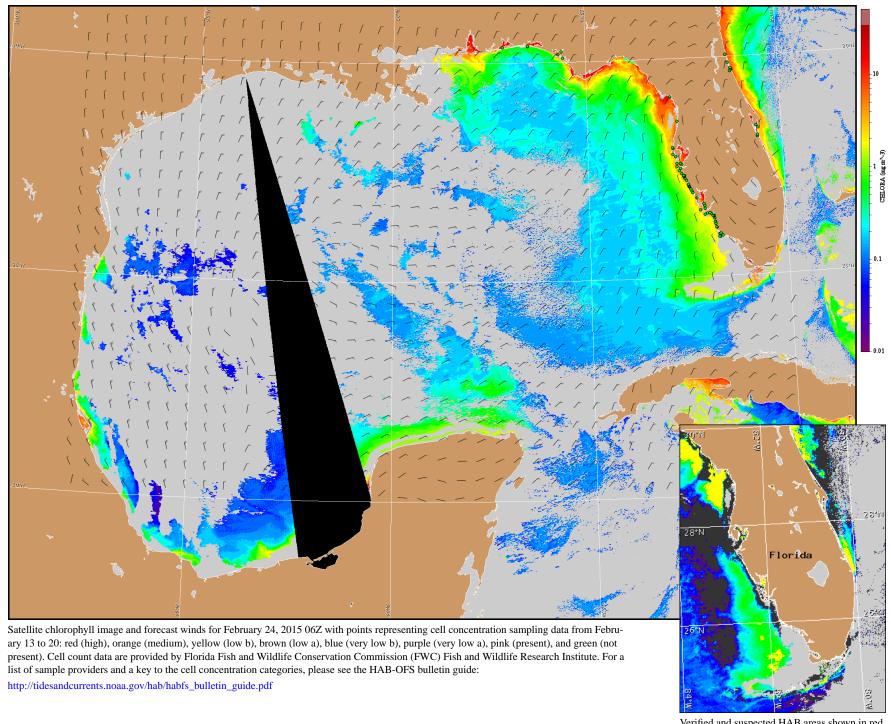

#### Kavanaugh, Davis

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

## Wind Analysis

**Englewood to Tarpon Springs (Venice)**: Variable winds (5-10kn, 3-5m/s) today through Tuesday. Southerly winds (5-20kn, 3-10m/s) Wednesday becoming northerly winds (10-15kn, 5-8m/s) Thursday through Friday.

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
